

Important information – new wood pellet stove

Thank you for choosing a new Kalor wood pellet stove from your Authorised Kalor Dealer. We want you to get the full benefits of your new Kalor stove, to enjoy its many advantages and to always be safe. Please thoroughly read this document as well as your stove's manual and any other documents/manuals provided to you.

User Manual

You have been provided with a User Manual for your stove. You should read this and ensure that you understand how to operate your new stove. The manual contains a lot of information regarding the use and maintenance of your stove as well as how to read and fix faults if they occur. If there is anything you don't understand, please ask your supplier or installer for a full explanation.

Maintenance

Your stove should be regularly maintained – there are daily tasks. Regularity will depend on usage, please read your manual to understand maintenance requirements for your model. Please also read our separate sheet regarding the procedures for regular maintenance.

Ventilation

Vents have been installed for your safety and for optimal combustion and the correct operation of the stove. It is essential that these vents are maintained and not blocked. For any low level vents, please ensure that no obstructions are placed close the vent, either inside or outside.

Carbon Monoxide Alarms

Carbon Monoxide is a poisonous gas, created from combustion of many fuels, including wood pellets. A carbon monoxide alarm has been installed and tested for your safety in accordance with Building Regulations Part J. It is very important that you regularly test your carbon monoxide alarm and replace batteries as necessary to ensure its correct operation.
